PROFILE

B.Tech Data Science student with hands-on experience in **Python, SQL, data analysis, machine learning, statistics, NLP, and data preprocessing**. Experienced in working with real-world datasets, performing **data cleaning, exploratory data analysis, feature engineering, visualization, classification, and model evaluation**. Skilled in Pandas, NumPy, Scikit-learn, TensorFlow, and SQL, with additional experience building data-driven applications and REST APIs. Seeking a Data Science internship to apply analytical and machine learning skills to real-world problems.

EDUCATION

MALLA REDDY UNIVERSITY

B.Tech in Data Science

Hyderabad, India

2023 – Present

Expected Graduation: May 2027

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Machine Learning, Statistics, Data Analytics

WORK EXPERIENCE

INTERNSHIP STUDIO

Data Science Intern

Hyderabad, India

Aug 2025 – Feb 2026

- Worked on multiple **real-world data science projects** using Python, Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn, covering data preprocessing, exploratory data analysis, visualization, feature engineering, and machine learning.
- Performed **COVID-19 Data Analysis** by cleaning and preprocessing a large structured dataset, handling missing values, transforming date-related features, grouping records, and generating analytical insights through data visualization.
- Conducted **Exploratory Data Analysis (EDA)** using statistical summaries, histograms, scatter plots, pair plots, and categorical visualizations to identify trends, correlations, distributions, and patterns in real-world datasets.
- Worked on a **Loan Classification** dataset by performing data preprocessing and applying classification techniques to predict loan approval outcomes, followed by model evaluation using a **confusion matrix**.
- Analyzed a **Company Profit** dataset to investigate relationships between business variables and profit, using data visualization and statistical analysis to identify meaningful trends and patterns.
- Applied **feature engineering, data transformation, missing-value treatment, duplicate handling, and data validation** to prepare datasets for machine learning and predictive modeling.

TECHNICAL SKILLS

Programming: Python, SQL, Java, C++, JavaScript

Data Science: Pandas, NumPy, Scikit-learn, Data Cleaning, Data Validation, Exploratory Data Analysis, Feature Engineering, Statistical Analysis, Predictive Modeling, Classification, Regression, Clustering

Data Visualization: Matplotlib, Seaborn, Data Visualization, Exploratory Visualization

Machine Learning: Classification, Regression, Model Evaluation, Confusion Matrix, Feature Transformation

AI/NLP: NLP, Text Preprocessing, TF-IDF, SVM, RNN, LSTM, Bi-LSTM, BERT, RoBERTa

Software Engineering: Data Structures & Algorithms, OOP, DBMS, REST APIs, Debugging, Problem Solving, Software Testing

Development: Node.js, Express.js, React.js, Spring Boot, HTML, CSS, FastAPI

Databases: MySQL, MongoDB

Tools: Git, GitHub, Jupyter Notebook, VS Code, Docker, Postman, Selenium, BeautifulSoup

PROJECTS

SKILL GAP ANALYZER

MERN Stack, FastAPI, NLP, MongoDB

- Developed a full-stack resume-analysis system that compares candidate profiles against job-specific requirements and identifies relevant and missing skills.
- Designed a resume-processing workflow to extract structured information from uploaded resumes and map candidate qualifications to standardized skill categories.
- Implemented backend APIs using Node.js, Express.js, MongoDB, and FastAPI for resume processing, job-role analysis, skill matching, and gap identification.
- Built data models for companies, job roles, skills, job requirements, and resumes to support structured candidate-to-role analysis.

AUTOPULSE – ASPECT-BASED SENTIMENT ANALYSIS

Python, Selenium, NLP, LSTM, Bi-LSTM

- Built an end-to-end sentiment analysis pipeline to collect and analyze customer reviews using Python and Selenium.
- Implemented text-cleaning, normalization, tokenization, and feature-transformation workflows for review analysis.
- Developed LSTM and Bi-LSTM classification pipelines to categorize reviews into Positive, Negative, and Neutral classes.
- Performed aspect-level sentiment analysis across pricing, vehicle condition, delivery, documentation, mileage, and customer service.

ML-POWERED RESUME SCREENER

Python, NLP, Scikit-learn, TF-IDF, SVM

- Developed an NLP-based resume screening system to automatically classify candidate profiles and rank resumes against job requirements.
- Implemented resume preprocessing pipelines including tokenization, stop-word removal, stemming, TF-IDF feature extraction, and model evaluation.
- Applied Scikit-learn and SVM techniques to build a structured candidate-classification workflow for automated resume screening.

CERTIFICATIONS

Microsoft Data Science Professional Certificate – 2025

Data Science Internship Certificate – Internship Studio – 2025

Deloitte Data Analytics Virtual Job Simulation – 2024
